The rear wiper blade is used less frequently, but is exposed to abrasive particles more often than the blades on the windshield, so it must also be replaced in time. Special wiper blades for the rear window are presented in two types - plastic and winter: The movable elements of the winter wiper are protected by a sealed rubber cover that does not allow ice to form on the frame elements and maintains full mobility of the rocker arm system. The strong frame of the plastic brush allows the rubber working element to adhere perfectly to the glass and to remove dirt efficiently. Masuma is a global brand of auto parts, components and consumables. The main specialization of the brand: resource parts for post-warranty service of Japanese cars. The company's strategy is to offer consumers the best ratio of reliability and cost of spare parts. All products are manufactured to order, technology and under the control of the parent company Masuma Auto Spare Parts Co., LTD (Tokyo, Japan) at dozens of modern factories located in East Asia.
